

Institutional Data Sheet

What Anesthesia Rotation Ready collects, why, where it lives, and how your institution and your students stay in control. Prepared for privacy, security, and vendor reviews. Operated by Anesthesia Knowledge Company, LLC (South Carolina).

What we collect - and what we never collect

Collected, entered by the student:

- Name and email address (email is the only identifier; there are no accounts or passwords)
- Module completion and lecture watch-through
- Quiz responses and scores
- Pre- and post-course confidence survey responses

Never collected:

- No protected health information and no patient data of any kind
- No academic records, grades, or evaluations from your institution
- No payment information from students
- No advertising trackers; we do not sell or share data for marketing

Why we collect it

The data exists for one purpose: the orientation record your program licenses - who completed the course, quiz results, and the pre/post confidence delta for your cohort. Sponsoring programs see only their own students' records.

Student notice and access

- Students are told at sign-in, before entering anything, that no account is created and that a sponsoring program receives their completion record.
- Any student may request a copy of their record, a correction, or deletion by emailing us; we honor requests within 30 days.
- Our [privacy policy](#) and [terms](#) are public at anesthesiarotationready.com/privacy and [/terms](https://anesthesiarotationready.com/terms).

Retention and deletion

- Records are retained for the duration of the program's pilot or license term.
- On termination, your program receives a final CSV export and cohort records are deleted on request.
- Individual deletion requests are honored at any time, from students or from the program.

Security and infrastructure

- Hosted on Vercel; data stored in Neon (managed PostgreSQL), US region. All traffic is encrypted in transit (TLS) and data is encrypted at rest by our providers.
- Administrative access is password-protected and limited to Anesthesia Knowledge Company personnel.
- Subprocessors: Vercel (hosting), Neon (database), Resend (transactional email). No other party receives student data.

Agreements

We are glad to review your institution's data-protection or service agreements as part of onboarding, and to answer any security questionnaire. Aggregate, de-identified engagement data is used only as agreed in the pilot terms.
